

## FEATURES

1. Power switches with an electromagnetic reset function which meet the need for energy savings in equipment and for safety.
Applications for these switches include promoting energy savings in equipment (by reducing power consumption when OA equipment is in standby mode, for example), preventing fires caused by overheating of a heater inside equipment, preventing electrical leaks, and automatically turning off the power if the unit tips over or is shaken. These switches feature a built-in electromagnetic reset function
that shuts off the main power supply in response to a signal that is received from an external sensor.
2. A dramatic upgrade in operation feelings
These switches provide the same comfortable operation feelings our conventional J8 switches.

- Comparison of feel when switch is turned on

3. CT terminals adopted for coil terminals
These switches can be used with AMP's CT connectors, which are widely used for wiring connections in OA equipment,
making it possible to achieve greater efficiency in wiring work.
Receptacle for AMP's CT connector

receptacle socket
4. Prolonged electrical service life.

Coil operation provides an electrical life of at least 50,000 switching operations.
5. Assures excellent ability to withstand inrush current when used to turn a power supply on/off.
The switch uses our own proprietary mechanism that provides an excellent ability to withstand inrush current is employed.
Inrush current rating (IEC65) : 160A (normally 16 A at 125 V AC), 10,000 times 6. Approved under major international safety standards.
UL, cUL, TÜV and SEMKO approved.

## OPERATING PRINCIPLE

- Manual operation is a repetition of $(A)$ and ( $B$ ) .

This operation is independent of the electromagnetic reset function.

- The reset mechanism operates only when an electromagnetic reset has occurred. (C)

AJ8R

## ORDERING INFORMATION

Remarks: 1. They come with a stamp indicating international standards without your request.
2. The color of $I O$ indication on the actuator is white.

## PRODUCT TYPES

Remarks: Standard actuator color is dark gray and black.
To order switches with a black actuator, replace the letter "Z" with " B " in the product numbers shown below when ordering.
(Ex.)
AJ8R1001ZC (Actuator color: Dark gray Flange color: Dark gray) $\rightarrow$ AJ8R1001BC (Actuator color: Black Flange color: Dark gray)

1. Without indication on actuators (Actuator color: Dark gray)

| Pole | Operation type | Coil voltage | Flange color: Dark gray | Flange color: Black |
| :---: | :---: | :---: | :---: | :---: |
| Single pole | ON-OFF | 5V DC | AJ8R1001ZC | AJ8R1001ZBC |
|  |  | 12 V DC | AJ8R1003ZC | AJ8R1003ZBC |
|  |  | 24V DC | AJ8R1004ZC | AJ8R1004ZBC |
|  | $\mathrm{ON}-\mathrm{ON}$ | 5V DC | AJ8R5001ZC | AJ8R5001ZBC |
|  |  | 12 V DC | AJ8R5003ZC | AJ8R5003ZBC |
|  |  | 24V DC | AJ8R5004ZC | AJ8R5004ZBC |
| Double pole | ON-OFF | 5V DC | AJ8R2001ZC | AJ8R2001ZBC |
|  |  | 12 V DC | AJ8R2003ZC | AJ8R2003ZBC |
|  |  | 24V DC | AJ8R2004ZC | AJ8R2004ZBC |

2. With $\mid \mathrm{O}$ indications on actuators (Actuator color: Dark gray)

| Pole | Operation type | Coil voltage | Flange color: Dark gray | Flange color: Black |
| :---: | :---: | :---: | :---: | :---: |
| Single pole | ON-OFF | 5V DC | AJ8R1011ZC | AJ8R1011ZBC |
|  |  | 12 V DC | AJ8R1013ZC | AJ8R1013ZBC |
|  |  | 24 V DC | AJ8R1014ZC | AJ8R1014ZBC |
|  | ON-ON | 5V DC | AJ8R5011ZC | AJ8R5011ZBC |
|  |  | 12 V DC | AJ8R5013ZC | AJ8R5013ZBC |
|  |  | 24 V DC | AJ8R5014ZC | AJ8R5014ZBC |
| Double pole | ON-OFF | 5V DC | AJ8R2011ZC | AJ8R2011ZBC |
|  |  | 12 V DC | AJ8R2013ZC | AJ8R2013ZBC |
|  |  | 24V DC | AJ8R2014ZC | AJ8R2014ZBC |

3. With -O indications on actuators (Actuator color: Dark gray)

| Pole | Operation type | Coil voltage | Flange color: Dark gray | Flange color: Black |
| :---: | :---: | :---: | :---: | :---: |
| Single pole | ON-OFF | 5V DC | AJ8R1021ZC | AJ8R1021ZBC |
|  |  | 12 V DC | AJ8R1023ZC | AJ8R1023ZBC |
|  |  | 24V DC | AJ8R1024ZC | AJ8R1024ZBC |
|  | ON-ON | 5V DC | AJ8R5021ZC | AJ8R5021ZBC |
|  |  | 12V DC | AJ8R5023ZC | AJ8R5023ZBC |
|  |  | 24 V DC | AJ8R5024ZC | AJ8R5024ZBC |
| Double pole | ON-OFF | 5V DC | AJ8R2021ZC | AJ8R2021ZBC |
|  |  | 12 V DC | AJ8R2023ZC | AJ8R2023ZBC |
|  |  | 24 V DC | AJ8R2024ZC | AJ8R2024ZBC |

## SPECIFICATIONS

## 1. Contact rating

| Voltage | Resistive load <br> $(\mathrm{pf}=1)$ | Motor load <br> $($ EN61058-1) <br> $(\mathrm{pf}=0.6)$ | Inrush load |
| :---: | :---: | :---: | :---: |

Remark: The motor load is in accordance with EN61058-1. Inrush current can be switched up to the value of 6 times the indicated rating.

## 2. Coil rating

| Nominal Voltage <br> ${ }^{\star}($ Max. 10 sec$)$ | Drop-out voltage <br> $\left(\right.$ at $\left.20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}\right)$ | Nominal operating current <br> $[ \pm 10 \%]\left(\mathrm{at} 20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}\right)$ | Coil resistance <br> $[ \pm 10 \%]\left(\mathrm{at} 20^{\circ} \mathrm{C} 68^{\circ} \mathrm{F}\right)$ | Maximum voltage <br> $(\mathrm{Max} .1 \mathrm{sec})$ |
| :---: | :---: | :---: | :---: | :---: |
| 5 V DC | Max.4.5V <br> Min.0.5V | 725 mA | $6.9 \Omega$ | 5.5 V |
| 12 V DC | Max.10.8V <br> Min.1.2V | 300 mA | $40 \Omega$ | 13.2 V |
| 24 V DC | Max.21.6V <br> Min.2.4V | 150 mA | $160 \Omega$ | 26.4 V |

Remark: If the rated voltage is applied to the coil for more than ten seconds or the maximum voltage is applied for more than one second, coil performance will deteriorate.

## 3. Characteristics

| Electrical life | Manual operation | Min. $10^{4}$ <br> (at 7 cpm. ,at rated load) |
| :---: | :---: | :---: |
|  | Coil operation | Min. $10^{3}$ <br> (at 7 cpm ., at rated load) <br> Min. $5 \times 10^{4}$ (at 7 cpm .5 A 125 V AC resistive load) |
| Mechanical life |  | Min. $5 \times 10^{4}$ (at 20 cpm .) |
| Initial contact resistance <br> (By voltage drop at 1A, 2 to 4V DC) |  | Max. $100 \mathrm{~m} \Omega$ |
| Initial insulation resistance |  | Min. $100 \mathrm{~m} \Omega$ (at 500 V DC measured by insulation resistive meter) |
| Initial breakdown voltage | Between contacts | 2,000 Vrms |
|  | Between coil and contact | 4,000 Vrms |
| Ambient temperature |  | $\begin{aligned} & 0^{\circ} \mathrm{C} \text { to }+60^{\circ} \mathrm{C} \\ & 32^{\circ} \mathrm{F} \text { to }+140^{\circ} \mathrm{F} \\ & \text { (Not freezing below } 0^{\circ} \mathrm{C} 32^{\circ} \mathrm{F} \text { ) } \end{aligned}$ |
| Ambient humidity |  | Max. 85\% R.H. |
| Vibration resistance |  | 10 to 55 Hz at single amplitude of 0.75 mm |
| Shock resistance | Functional | Min.294m/s²\{30G\} (Contact opening Max. 1ms) |
|  | Destructive | Min. $980 \mathrm{~m} / \mathrm{s}^{2}\{100 \mathrm{G}\}$ |
| Tensile terminal strength |  | . 250 Quick-connect terminal Min. 98N\{10kgf\}/min. (Pull \& push direction) |
| Actuator strength |  | 39.2N\{4kgf\} for 1min. operating direction |
| Contact release time |  | Max. 100ms (at rated voltage) |
| Initial operating force <br> * Reference value |  | 4.9 N or less (Max. 500 gf or less) <br> Setting force after reset has been released: Max. 6.86N or less (Max. 700gf or less) |
| Flame retardancy |  | UL94V-0 |
| Tracking resistance |  | Min. 175 |
| Unit weight |  | Single pole, single throw: Approx. 17 g .60 oz Single pole, double throw: Approx. 19 g .67 zz Double pole, single throw: Approx. 20 g .71 oz |

Remark: Test conditions are in accordance with EN61058-1,UL1054 and JIS C 6571

Diagram of recommended locations for panel mounting holes

| Panel thickness | X | Y |
| :---: | :---: | :---: |
| $\begin{aligned} & 1 \text { to less than } 1.8 \\ & .039 \text { to } .071 \end{aligned}$ | $\begin{aligned} & 30.4_{-0.1}^{+0} \\ & 1.197_{-0.04}^{+0} \end{aligned}$ | $\begin{aligned} & 22 . \mathbf{N O}_{+0.1}^{+0.1} \\ & .86-04 \end{aligned}$ |
| $\begin{aligned} & 1.8 \text { to } 2.3 \\ & .071 \text { to } .091 \end{aligned}$ | $\begin{aligned} & 31.1{ }_{-0.1}^{+0} \\ & 1.224_{-.00}^{+0} \end{aligned}$ | $\begin{aligned} & 22.0_{-0.1}^{+0.1} \\ & .866-0.04 \end{aligned}$ |

Remark: Contact us if you are considering using a panel of other than the recommended size and shape.

Remarks: 1. The external dimensions and mounting dimensions for the single pole, single throw type and the single pole, double throw type are the same as those for the double pole, single throw type indicated above.
2. The figures show the double pole, single throw (ON-OFF) type as an example.

The contact terminals are 1, 2, 3, and 4 .
In the case of the single pole, single throw (ON-OFF) type, the contact terminals are 1 and 2.
In the case of the single pole, double throw (ON-ON) type, the contact terminals are 1,2 , and 4.
There are no other terminals.
Refer to the internal wiring diagram.
3. The coil is a polarized coil; coil terminal 5 is positive and coil terminal 6 is negative.

## NOTES

1. Operating voltage application time If the rated voltage is applied to the coil for more than 10 seconds or the maximum voltage is applied for more than 1 second, coil performance may deteriorate.
2. The shape of the mounting panel should be as recommended in the dimensions diagram.
Contact us if you are considering using a panel of other than the recommended size and shape.
3. The mounting panel should be made of SPCC. If a different material is used, its adhesion to the switch unit may be not be as strong. Check this on site if necessary.
4. Note that the actuator could pop out of the switch housing if 19.6 N ( 2 kgf ) or more of force is applied to the side of the actuator.
5. 

(1) When connecting the tab terminals, use a . 250 receptacle and insert the terminals straight in.
If you insert them at an angle, the terminals could catch on the opening and will require greater insertion force.
(2) The coil terminals have specific polarities. Make sure you connect them correctly.
(3) Use a receptacle that is compliant with JIS C 2809.
In addition, there is some deviation regarding the insertion force depending on the model used from different manufacturers, so the insertion force should be checked under realistic conditions.
(4) Use AMP's CT connector for the coil terminals.
6. Because special receptacle terminals are used for the contact terminals and the common terminals, do not attempt to solder them. Doing so could melt plastic components and otherwise harm the performance of the switch
7. The terminals should be connected in such a way that they are not under constant stress from the connecting wires.
8. Take care not to drop the product as it may impair performance.
9. Resistance to chemicals

To clean the switch unit, use a neutral detergent diluted with water.
Do not use acidic or alkaline solvents as they may damage the switch.
Furthermore, be careful not to get any of the detergent solution inside of the switch while cleaning it.
10. This product is not hermetically sealed, so its performance could deteriorate under certain ambient conditions. Avoid using and storing these switches in a location where they will be exposed to corrosive gases, silicon, or high dust levels, all of which can have an adverse effect on the contacts. In addition, because these switches contain permanent magnets, avoid using and storing these switches in a location where metallic dust, etc., is present.
11. When these switches are used with weak currents of 500 mA or less, a layer of material on the surface of the contacts may cause contact instability. Check and evaluate this possibility before using these switches under such conditions.
12. When using an ON-OFF type switch with no $(\mid O)$ indication on the actuator, the "OFF" position should be indicated on the set in which the switch is installed.
13. To assure reliability, check the switch under actual loading conditions. Avoid any situation that may adversely affect switching performance.

## COIL TERMINAL CONNECTOR

Because CT terminals are used for the coil terminals, AMP's CT connector can be used.
Remark: We do not sell this type of connector. Questions concerning this connector should be directed to the manufacturer.
